LRMoo Update

For CIDOC CRM SIG

21 March 2024

Pat Riva, Maja Zumer, Trond Aalberg

IFLA Standards Review of LRMoo

- LRMoo ver.0.9.6 was submitted for review on 4 October 2024
- IFLA Committee on Standards had procedural issue to resolve
- Review started after 13 December 2023 meeting
- On 4 February 2024, LRMoo received a positive recommendation

- Formatting in IFLA style and template still needed to submit to IFLA Governing Board for endorsement – aiming for April meeting

- FRBRoo ver.2.4 will have a deprecated status for IFLA

To reach LRMoo 1.0

- Editorial points raised by reviewers:
  - Should explain about why some properties use the same labels (in 4.3 Naming Conventions)
  - Ensure model overview in section 4.2 is understandable without referring to FRBRoo definition, LRMoo should stand on its own
  - Scope chapter is probably too brief

- Correct R68 label in hierarchy table and as R2 superproperty, thus correct mapping of LRM-R21 in section 8 (thanks, Eleni!)

- One last round of verifying compliance with SIG templates for examples, etc.
- FOL: for ver. 1.1?

LRMoo 0.9.7 -- describing LRMoo without comparison to FRBRoo

Section 1. Introduction: integrate reference to 2022 IFLA conference paper on changes between FRBRoo and LRMoo

Section 2. Scope: to be expanded?

Section 3. Status: new first paragraph emphasizing dual community approval process, with reference to 2023 IFLA conference paper

Section 4. Description

Revise section 4.2.1 on creation events

Edit 4.2.4 (WEMI properties) and 4.2.5 (Performances)

LRMoo 0.9.7 -- Property naming

- New paragraph in section 4.3. Naming conventions
- Properties with similar semantic content operating between different domains and/or ranges are given the same verbal phrase as property label, however their names are unique due to their different property identifiers. For example, property *R16 created (was created by)* with domain F27 Work Creation and range F1 Work is has an identifier distinct from property *R17 created (was created by)* which has domain F28 Expression Creation and range F2 Expression.

On CIDOC CRM site

- Under compatible models (https://cidoc-crm.org/collaborations), need to change the tile from FRBRoo to LRMoo, or at least add LRMoo to that tile

- Can the model page show LRMoo prominently?
  - https://www.cidoc-crm.org/frbroo/ (can URL change?)
  - Rewrite home page text
  - Rewrite text on short intro: https://www.cidoc-crm.org/frbroo/short-intro-frbroo

IFLA BCM Review Group

- CoS reviewers asked for introductory material for beginners
- BCM RG met 8 March and added this task to their action plan
- This to be developed for the IFLA website

- PRESSoo WG is not yet restarted
  - ISSN International Office to be consulted
